Focus PLUS At-A-Glance

Our investment philosophy is to prepare your portfolio for where the economy and capital markets are headed. Your portfolio will be designed to contain core holdings to meet your risk tolerance and time horizons. The FocusPLUS strategies are built with clear objectives in mind and are actively managed to guide your portfolio toward its intended target.

Advisory services offered through Novem Group, an SEC-Registered Investment Adviser. Performance is gross of advisor's fees, commissions and transaction fees, margin, taxes, and will affect the actual outcomes of transactions. Past performance is not indicative of future results. No representation is made that any returns indicated will be achieved. This strategy involves risk. Principal loss is possible. Investments in foreign securities involve greater volatility and political, economic and currency risks, as well as differences in accounting methods. These risks are greater for emerging markets. Small and medium capitalization companies tend to have limited liquidity and greater price volatility than large capitalization companies. Options on securities may be subject to greater fluctuations in value than in investments in the underlying securities. The investment in options is not suitable for all investors. The risk of investments in derivatives include an imperfect correlation between the value of these instruments and the underlying assets, the risk of default by the other parties to derivative transactions, the risk that transactions may result in losses that partially or completely offset gains in portfolio positions, and the risk that the derivative transactions may not be liquid. The strategy may engage in short sales of securities, which involves the risk that losses may exceed the original amount invested. Unlike mutual funds, ETFs do not necessarily trade at the net asset values of their underlying securities, which means an ETF could potentially trade above or below the value of the underlying portfolios. Additionally, because ETFs trade like stocks on exchanges, they are subject to trading and commission costs, unlike open-end investment companies. High-yield debt securities (also known as "junk bonds") that are rated below investment grade are subject to additional risk factors, such as an increased possibility of default, illiquidity, and changes in value based on many factors. Such securities are generally considered speculative because they present a greater risk of loss, which includes to default, than higher-quality debt securities. Interest rates may go up, resulting in a decrease in the value of the securities held by the strategy. Credit risk is the risk that an issuer will not make timely payments of principal and interest. Diversification does not assure a profit or protect against loss in a declining market. Auto rebalance trades have a minimum buy amount of \$100 and a minimum sell amount of \$125.

Focus PLUS 10

Investment Approach

The FocusPLUS 10 portfolio is comprised of stocks considered to have superior risk-adjusted capital appreciation potential. We use a concept that defines an investment's return by measuring how much risk is involved in producing that return. FocusPLUS 10 is a dynamic model, deploying a strategy that involves rebalancing a portfolio to bring the asset mix back to its long-term target.

Portfolio Structure

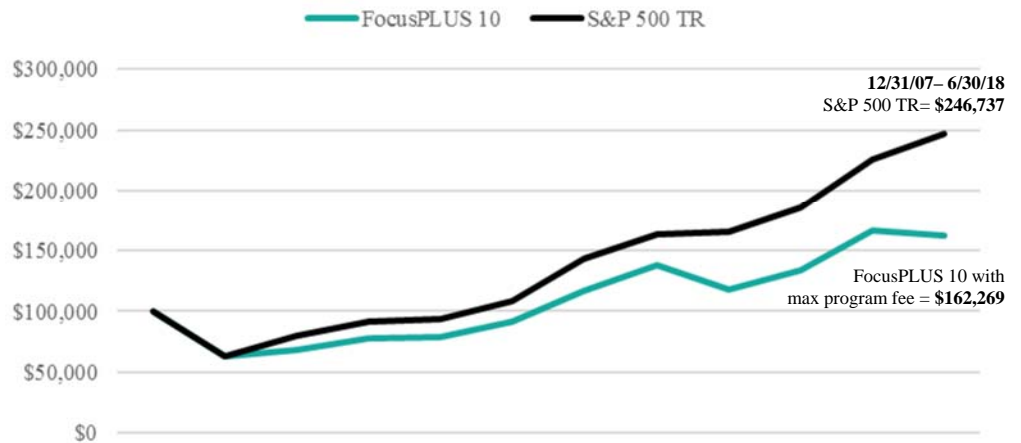

The FocusPLUS 10 model portfolio is comprised of stocks considered to be well poised for risk-adjusted capital appreciation over the coming 12 months. Stocks must have a 5-STARS ranking to enter the model, but can remain in the model portfolio if the ranking drops to 4-STARS. If a stock's ranking falls below 4-STARS, it will be removed. Any stock in the model portfolio may be replaced with a 5-STARS stock at any time. The minimum investment is \$25,000.

Investment Objective: To achieve long-term growth of capital.

STARS (Stock Appreciation Ranking System)	
★★★★★★ Strong Buy	Total return is expected to outperform the total return of a relevant benchmark*, by a wide margin over the coming 12 months, with shares rising in price on an absolute basis.
★★★★★ Buy	Total return is expected to outperform the total return of a relevant benchmark*, over the coming 12 months, with shares rising in price on an absolute basis.
★★★ Hold	Total return is expected to closely approximate the total return of a relevant benchmark* , over the coming 12 months, with shares generally rising in price on an absolute basis.
★★ Sell	Total return is expected to underperform the total return of a relevant benchmark*, over the coming 12 months, and the share price not anticipated to show a gain.
★ Strong Sell	Total return is expected to underperform the total return of a relevant benchmark* over the coming 12 months, with shares falling in price on an absolute basis.

* Relevant benchmarks: North America- S&P 500 Index, Europe- S&P 350 Index, Asia- S&P 50 Index

Hypothetical Growth of \$100,000 Investment

	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	YTD
FocusPLUS 10 (%)	-36.64	10.34	13.83	1.86	17.03	29.05	18.36	-13.55	13.75	24.89	-1.89

In calculating model portfolio performance dividends are assumed to be reinvested in the model portfolio at equal weight, and do not take into account capital gains taxes or brokerage commissions and fees. Model portfolio composite includes daily rebalancing, and returns do not include payment of any sales charges or fees an investor would pay to purchase the securities they represent. The figures presented above refer to the past. Past performance of the model portfolio is not a reliable indicator of future results. This performance calculation also does not take into account timing differences between the model portfolio selections and purchases made based on those selections by actual investors. Inception of this strategy was 12/31/01, performance data from inception available upon request. Hypothetical growth of \$100,000 investment is based off of 70 bps max program fee annual returns.

Focus PLUS Cap App

Investment Objective: Seeks an allocation to individual stocks with an above-average 10-year history of dividends, earnings, growth, and stability.

Investment Approach

The FocusPLUS High-Quality Capital Appreciation (Cap App) utilizes S&P Global Market Intelligence Quality Ranking, which measures 10-year history of earnings and dividend growth and stability. Historically, stocks with the best Quality Rankings posted higher profit margins, higher return on capital, and stronger cash flows than lower quality stocks. Higher-quality stocks also incurred less volatility.

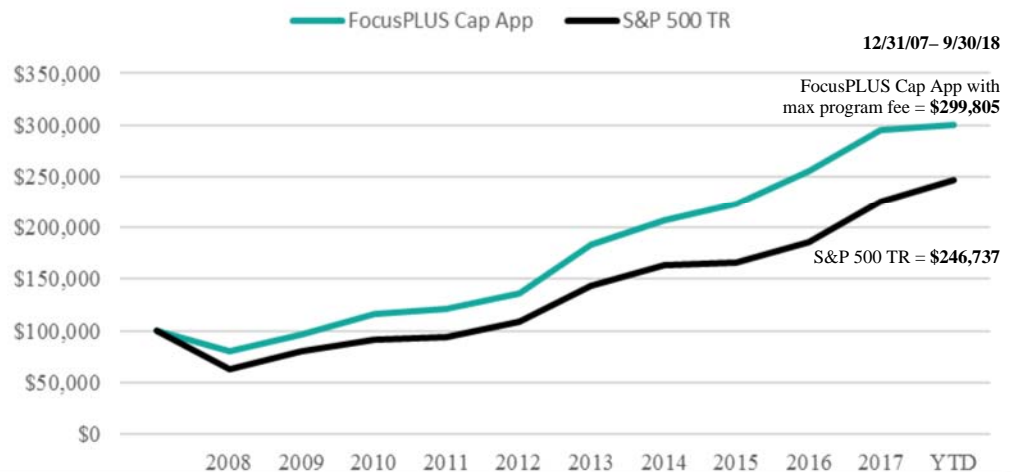

Quality Ranking	
Highest	A+
High	A
Above Average	A-
Average	B+
Below Average	B
Low	B-
Lowest	C
In Reorganization	D
Not Ranked/Liquidation	NR/LIQ

STARS (Stock Appreciation Ranking System)
★★★★★ Strong Buy
★★★★ Buy
★★★ Hold
★★ Sell
★ Strong Sell

Portfolio Structure

Stocks must have a Quality Ranking of A- or better to enter the FocusPLUS Cap App model. Stocks must also have a 4 or 5 STARS ranking to enter the model portfolio. Novem Group may replace any stock in the model portfolio at any time, for reason that can include a downgrade in the STARS or Quality Ranking of the constituents or other fundamental factors. The minimum investment is \$25,000.

Focus PLUS Dividend Select

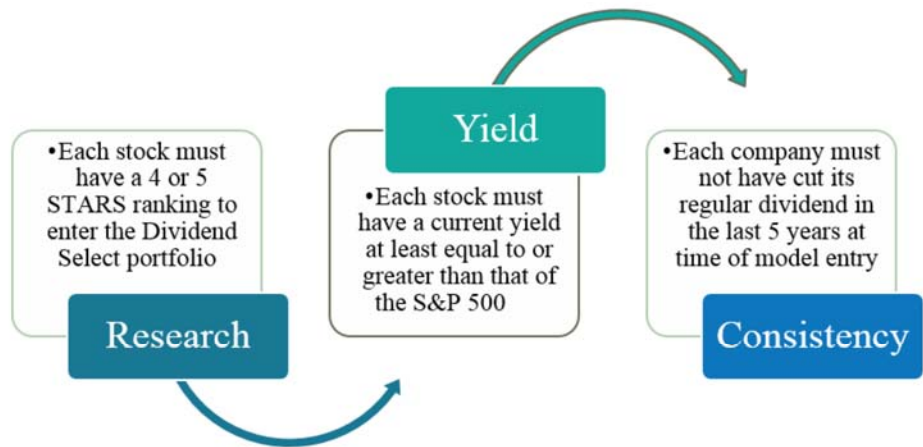

Investment Objective: Seeks high-quality stocks that offer an attractive dividend yield.

Investment Approach

The FocusPLUS Dividend Select model portfolio is designed for long-term total return. The goal is to provide investors with the opportunity to invest in high-quality stocks that offer an attractive dividend yield and capital appreciation. The core values of the FocusPLUS Dividend Select model holdings are: Stocks expected to outperform the relevant benchmark over the coming 12 months based on research, stocks that offer an attractive dividend yield, and selecting companies that have proven dividend consistency.

Portfolio Structure

Stocks must meet all screening criteria in order to enter the FocusPLUS Dividend Select model portfolio. Novem Group may replace any stock in the model portfolio with another stock at any time for reasons that can include a downgrade in the STARS, a dividend reduction, or other fundamental factors. Performance is measured against the S&P 500, including dividends. The minimum investment is \$25,000.

Focus PLUS 25

Investment Objective: Seeks to outperform the market by buying undervalued issues with the potential to deliver above-market returns.

Investment Approach

The FocusPLUS 25 is created by combining Fair Value, Quality Ranking, Stock Ranking, and Price target analysis.

The Fair Value Model calculates a stock's weekly Fair Value to be "the price at which it should trade at current market levels," and is based on fundamental data, such as earnings growth potential.

The Quality Rank measures the growth and stability of the company's earnings and dividends over the past 10 fiscal years.

Stock Ranking evaluates stocks considered to be well poised for risk-adjusted appreciation over the coming 12 months.

Price Target is a projection of the stock's market price 12 months forward. It is based on a combination of intrinsic, relative and private market valuation metrics.

Portfolio Structure

Stock data is filtered through a model, which creates a universe of equities. There are generally between 2000-2500 issues in the universe. The minimum investment is \$25,000.

Hypothetical Growth of \$100,000 Investment

Options on securities may be subject to greater fluctuations in value than investments in the underlying securities. The investment in options is not suitable for all investors. The risk of investments in derivatives include an imperfect correlation between the value of these instruments and the underlying assets, the risk of default by the other parties to derivative transactions, the risk that transactions may result in losses that partially or completely offset gains in portfolio positions, and the risk that the derivative transactions may not be liquid. The strategy may engage in short sales of securities, which involves the risk that losses may exceed the original amount invested. Unlike mutual funds, ETFs do not necessarily trade at the net asset values of their underlying securities, which means an ETF could potentially trade above or below the value of the underlying portfolios. Additionally, because ETFs trade like stocks on exchanges, they are subject to trading and commission costs, unlike open-end investment companies. High-yield debt securities (also known as "junk bonds") that are rated below investment grade are subject to additional risk factors, such as an increased possibility of default, illiquidity, and changes in value based on many factors. Such securities are generally considered speculative because they present a greater risk of loss, which includes to default, than higher-quality debt securities. Interest rates may go up, resulting in a decrease in the value of the securities held by the strategy. Credit risk is the risk that an issuer will not make timely payments of principal and interest. Diversification does not assure a profit or protect against loss in a declining market. Auto-rebalance trades have a minimum buy amount of \$100 and a minimum sell amount of \$125.

Focus PLUS Intrinsic Value

Investment Objective: To achieve long term capital growth by seeking undervalued issues trading at a reasonable price.

Investment Approach

Warren Buffet uses very sophisticated quantitative screens to determine which companies belong in his portfolio. The FocusPLUS Intrinsic Value uses Warren's five specific investment criteria, and adds one additional screen to eliminate overvalued stocks. The model portfolio is comprised of stocks that we believe the market has undervalued and are available at a sensible price.

- I.** Free cash flow (net income after taxes, plus depreciation and amortization, less capital expenditures) of at least \$250 million
- II.** Net profit margin of 15% or more
- III.** Return on equity of at least 15% for each of the past three years and the most recent quarter
- IV.** A dollar's worth of retained earnings creating at least a dollar's worth of shareholder value over the past five years
- V.** Ample liquidity. Only stocks with the market capitalization of at least \$500 million are included
- VI.** Overpriced stocks are identified by comparing our five-year discounted cash flow estimate with the current price

40+ stocks chosen for FocusPLUS Intrinsic Value Portfolio

Hypothetical Growth of \$100,000 Investment

Portfolio Structure

FocusPLUS Intrinsic Value portfolio is 40+ holdings which are comprised of primarily large cap companies. The model portfolio is updated twice per year (Spring and Fall). It is important to note that these are not stocks Buffet has purchased or announced plans to purchase, they are simply stocks that meet the criteria the Buffet has emphasized in the past. The minimum investment is \$25,000.

	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	YTD

FocusPLUS Intrinsic Val. with max program fee (%)	-31.01	47.88	18.77	-8.51	12.11	32.68	22.66	-0.70	9.88	24.21	11.62
S&P 500 TR (%)	-37.00	26.46	15.06	2.11	16.00	32.39	13.69	1.38	11.96	21.83	9.18

In calculating model portfolio performance dividends are assumed to be reinvested in the model portfolio at equal weight, and do not take into account capital gains taxes or brokerage commissions and fees. Model portfolio composite includes daily rebalancing, and returns do not include payment of any sales charges or fees an investor would pay to purchase the securities they represent. The figures presented above refer to the past. Past performance of the model portfolio is not a reliable indicator of future results. This performance calculation also does not take into account timing differences between the model portfolio selections and purchases made based on those selections by actual investors. Inception of this strategy was 2/13/95, performance data from inception available upon request. Hypothetical growth of \$100,000 investment is based off of 70 bps max program fee annual returns.

Advisory services offered through Novem Group, an SEC-Registered Investment Adviser. Performance is gross of advisor's fees, commissions and transaction fees, margin, taxes, and will affect the actual outcomes of transactions. Past performance is not indicative of future results. No representation is made that any returns indicated will be achieved. This strategy involves risk. Principal loss is possible. Investments in foreign securities involve greater volatility and political, economic and currency risks, as well as differences in accounting methods. These risks are greater for emerging markets. Small and medium capitalization companies tend to have limited liquidity and greater price volatility than large capitalization companies. Options on securities may be subject to greater fluctuations in value than in investments in the underlying securities. The investment in options is not suitable for all investors. The risk of investments in derivatives include an imperfect correlation between the value of these instruments and the underlying assets, the risk of default by the other parties to derivative transactions, the risk that transactions may result in losses that partially or completely offset gains in portfolio positions, and the risk that the derivative transactions may not be liquid. The strategy may engage in short sales of securities, which involves the risk that losses may exceed the original amount invested. Unlike mutual funds, ETFs do not necessarily trade at the net asset values of their underlying securities, which means an ETF could potentially trade above or below the value of the underlying portfolios. Additionally, because ETFs trade like stocks on exchanges, they are subject to trading and commission costs, unlike open-end investment companies. High-yield debt securities (also known as "junk bonds") that are rated below investment grade are subject to additional risk factors, such as an increased possibility of default, illiquidity, and changes in value based on many factors. Such securities are generally considered speculative because they present a greater risk of loss, which includes to default, than higher-quality debt securities. Interest rates may go up, resulting in a decrease in the value of the securities held by the strategy. Credit risk is the risk that an issuer will not make timely payments of principal and interest. Focus PLUS Fixed

Investment Objective: To complement a FocusPLUS portfolio to achieve the desired asset allocation that reflects the appropriate risk tolerance.

Investment Approach

The FocusPLUS Fixed seeks to identify opportunities across the fixed income spectrum and allocate to the leading sector(s). It strives to maximize total return while minimizing overall risk. By blending FocusPLUS Fixed with FocusPLUS equity models, you can achieve the desired asset allocation that reflects the appropriate risk tolerance.

Reduce Interest Rate Sensitivity:

Deliver exposure to income generating vehicles that have less interest rate sensitivity.

Maximize Potential Income with Risk Control:

Provide investors with potential for higher returns with the option to shift to safe fixed income sectors.

Utilize a Flexible Bond Approach:

Identify and participate in positive market trends and move away from underperforming trends.

Portfolio Structure

The FocusPLUS Fixed is a fixed income portfolio, which is actively managed for both total return and income. The minimum stand alone investment is \$25,000. FocusPLUS Fixed is typically blended with FocusPLUS equity model, in which case the minimum investment of the equity model would apply for total portfolio.

AA	1.34
A	5.63
BBB	9.66
BB	6.07
B	6.07
Below B	1.19
NR	2.29

Flexible Bond Approach

An important characteristic of the strategy is its ability to shift out of lower quality areas when needed and invest in high quality debt or cash. It uses asset allocation that seeks to rotate among low quality debt, high quality debt, and short term treasuries.
